Tulsi Gabbard calls on Congress to BAN atrazine and other dangerous crop chemicals linked to chemical castration of children

Former United States Rep. Tulsi Gabbard is asking legislators to take action against the chemical industry, which is spraying a highly toxic gender-bender crop chemical known as atrazine all over our food.

Atrazine is dangerous in that it alters a person's hormone profile. Studies show that frogs and other animals exposed to atrazine often turn into the opposite sex, i.e., male frogs become female, and vice versa. Many now speculate that perhaps the transgender craze is due in part to widespread atrazine exposure.

"Congress must ban atrazine, one of the most widely used and toxic herbicides, to stop further contamination of our food & water supply," Gabbard wrote in a tweet. "Atrazine 'wreaks havoc with the sex lives of adult male frogs, emasculating three-quarters of them and turning 1 in 10 into females' according to studies."

Twenty twenty-four presidential contender Robert F. Kennedy Jr. has also spoken out about atrazine, warning that it has no place in agriculture due to the massive risks involved with its use.

(Related: Did you know that the natural supplement chlorine dioxide destroys atrazine in drinking water?)

Gabbard, Kennedy, and many others are waking up the masses to the chemical destruction of America's toxic food supply

The corporate media is having a meltdown over these and other prominent figures drawing attention to the chemical pollution being sprayed all over the American food supply. Some outlets are in a panic about it, spreading misinformation and lies in an attempt to quell public fears about the matter.

Since the media is bought and paid for by big industries such as those that profit from pharmaceuticals, crop chemicals, and even transgender mutilation, it only makes sense that the "official" news sources are decrying the facts being stated by Gabbard, Kennedy, and others.

The aforementioned study that Gabbard was referring to in her tweet was published on March 1, 2010. Researchers from *UC Berkeley* looked at the negative impacts of atrazine, which has been in use in American agriculture for many years.

"The EU has already banned it, now U.S. must do the same," Gabbard further wrote in her tweet about atrazine. "Call your reps."

Gabbard's tweet came after *Axios* published a hit piece on July 5 trying to paint those talking about the deleterious effects of atrazine as conspiracy theorists.

"Fringe gender-chemical theory goes mainstream," *Axios* scoffed about all the attention atrazine is receiving these days.

The *Axios* hit piece claims that those exposing the truth about atrazine are doing so "without scientific evidence," referring to people like Gabbard and Kennedy as "fringe political figures" who "are increasingly blaming the existence of transgender people on environmental pollution."

It turns out that the *Axios* hit piece followed another even worse one from some media outlet we will not name that was referred to by *Axios* as being "America's LGBTQ News Source."

In that piece, Kennedy is referred to as a "noted anti-vaccine conspiracy theorist ... whose career has been defined as much by his membership in one of America's most famous families as by his allegiance to dangerous conspiracy theories."

These cheap shots might work on the handful of people who still read mainstream "news," but most people these days are waking up to the fact that vaccines, crop chemicals, and other big industry products are dangerous and should be outlawed.

The U.S. Centers for Disease Control and Prevention (CDC) is another atrazine denier that claims the crop chemical is safe for the general population at current exposure levels.

Many crop chemicals currently in use are endocrine-disrupting poisons, and their residues are left behind in our nation's tainted food supply. Learn more at ChemicalViolence.com.

How are they supposed to achieve their depopulation goals if they stopped poisoning us.? As Alex Jones famously said years ago (and the MSM exploded), 'ATRAZINE turns the freakin frogs gay'. Yes, he may have used comedic-bluster at the time, but he was proven right again. The
